GREENS REPORT

APRIL 2010

At last after a long and miserable winter, spring seems to have come, and although not all that warm as yet, the grass has started to grow.

The greens and tees have had a light feed and the greens, although still soft have dried up enough to be top dressed and over seeded.

This will help smooth out the bumps from footmarks etc., which have been fairly bad in this wet winter. As the grass grows things will improve and we should be soon putting on some good surfaces once again.

The winter programme has now all but finished for this season and considering the weather it has gone pretty well.

The lower 13th tee has just been re-laid. It is quite ironic after all the rain we have had it is now dry and Colin has had to water the turf as it has dried so much as to start shrinking.

A path has been put in to access that tee safely although **NO TROLLEYS DOWN THERE GENTS** as there is no exit that way.

There are some bad worn areas in places due to the bad winter and it would be appreciated if members would try and walk around them, as this will then allow them to grow back.

Also, would members please also use the paths on the course at all times.

Now lets hope for some good weather and a good golfing summer.
